

Sustainability Commitment

At Lemóva, we are committed to developing lighting solutions with a responsible and forward-thinking approach to environmental sustainability. Our design, sourcing, and supply practices are guided by the objective of reducing environmental impact while delivering high-quality, long-lasting lighting products.

We work closely with our manufacturing partners and suppliers to encourage alignment with recognized sustainability standards, improved material transparency, and responsible sourcing practices. This enables us to provide our customers with products that support sustainable project requirements and environmental certifications.

Lemóva promotes responsible product lifecycle management by encouraging durable design, ease of maintenance, and proper end-of-life material handling to reduce waste and maximize product usability.

We are continuously working to:

Increase the use of recyclable and environmentally responsible packaging materials

Encourage the use of recyclable and reusable components wherever possible

Support material transparency in our supply chain

Align our products with green building and sustainability certification requirements where applicable

Through these efforts, Lemóva aims to contribute to a more sustainable built environment while maintaining the performance and reliability expected from our lighting solutions.
